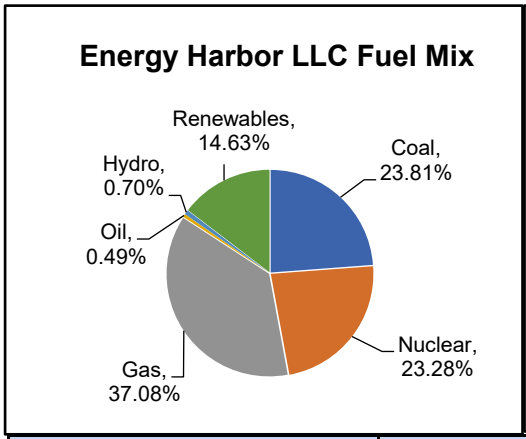
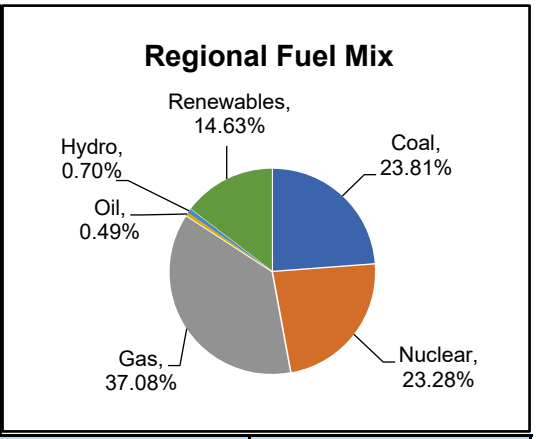
Energy Harbor LLC

The environmental characteristics of your electricity as required by Public Act 141 of 2000.

Comparison of the Fuel Sources Used to Generate Electricity

Energy Harbor vs. regional average for the 12-month period ended: July 2026





Fuel Sources	Percentages of fuel types used to produce Energy Harbor's electricity.	Percentage of fuel type used to produce electricty in Michigan, Illinois, Indiana, Ohio, and Wisconsin.
Coal	23.81%	23.81%
Nuclear	23.28%	23.28%
Gas	37.08%	37.08%
Oil	0.49%	0.49%
Hydroelectric	0.70%	0.70%
Total Renewable Fuels*	14.63%	14.63%
Biofuel	0.48%	0.48%
Biomass*	0.24%	0.24%
Solid Waste Incineration	0.10%	0.10%
Solar	5.50%	5.50%
Wind	7.96%	7.96%
Wood	0.35%	0.35%

*Includes landfill gas

Note: If "-" is referenced on the table it indicates that fuel source is not applicable or negligible, less then 0.001%.

Airborne Emissions and High-Level Nuclear Waste Comparison

Energy Harbor vs. regional average for the 12-month period ended December 2022.

Type of emission/waste	Energy Harbor's average lbs/MWh	A regional average of fossil/nuclear generation in Michigan, Illinois, Indiana, Ohio and Wisconsin (lbs/MWh)
Sulfur Dioxide	0.56	0.56
Carbon Dioxide	918.43	918.43
Nitrogen Oxides	0.55	0.55
High-level nuclear waste**	0.006	0.006

**Note: High-level nuclear waste is based on discharged fuel for a time span of approximately 3 years in length ending in 2013.
