Re: Case No. U-12487 Regional Mix & Emissions Disclosures

To Whom It May Concern:

In accordance with the Michigan Public Service Commission's Order in Case No. U-12487, CMS ERM Michigan L.L.C. hereby submits the fuel source and environmental information for the most recent twelve-month period available on the Commission's website.

If you have any questions, please feel free to contact me at (734) 201-2385 or via email at monika.burgamy@nsce.com.

Sincerely,

Monika B. Burgamy
Manager ERM Commercial Operations

Enclosure

CMS ERM Michigan LLC

The environmental characteristics of your electricity as required by Public Act 141 of 2000.

Comparison of the Fuel Sources Used to Generate Electricity

CMS ERM Michigan LLC. vs. regional average for the 12-month period August 2024 - July 2025

Fuel Sources	Percentage of fuel types used to produce [supplier's name] electricity.	Percentage of fuel type used to produce electricity in Michigan, Illinois, Indiana, Ohio, and Wisconsin.
Coal		25.848
Nuclear		24.24
Gas	93	35.9551
Oil		0.488
Hydroelectric		0.659
Total Renewable Fuels	7	12.81
Biofuel	7	0.517
Biomass		0.248
Solid Waste Incineration		0.128
Solar		3.585
Wind		7.907
Wood		0.426

Note: (1) Biomass above excludes wood; solid waste incineration includes landfill gas, and (2) "---" indicates not applicable or negligible, less than 0.1%.

Airborne Emissions and High-Level Nuclear Waste Comparison

CMS ERM Michigan LLC vs. regional average for the 12-month period ended July 31, 2025.

Type of emission/waste	[supplier's name] average lbs/MWh ^{1,2}	A regional average of fossil/nuclear generation in Michigan, Illinois, Indiana, Ohio, and Wisconsin (lb/MWh)
Sulfur Dioxide	0.16	0.560
Carbon Dioxide	1,374	941
Oxides of Nitrogen	0.28	0.58
High-level nuclear waste	0	0.0006

¹ The CMS ERM LLC portfolio includes Kalamazoo River Generating Station, Livingston Generating Station, and Dearborn Industrial Generation. Emission rates in pounds per megawatt-hour are based on emission rates in tons per year October 2024- September 2025 emissions summary data from the U.S. Environmental Protection Agency's Clean Air Markets Division. MW electric generation data was provided by NorthStar.

² Dearborn Industrial Generation is a cogeneration facility with units that both produce process steam and generate electric. Emission rates presented in this table include emissions from both process steam production and electrical generation. Emission rates that include only production of electricity are less than the rates presented in this table.
