Attn: Peter Lark, Chairman

We are writing in reference to Case No. U-14861. First of all, we would like to say that we are opposed to ITC request for an expedited schedule as it refers to Hartland MI.

We are very opposed to ITC bringing in these massive above ground power lines. We are firm believers, and have been for many years, that these big above ground power lines cause infertility and cancer. We are very concerned about having our children around these lines and will move out of the area if they come in. Before moving to Hartland, we found our dream house and would not buy it because it was too close to massive power lines like ITC wants to bring in. We wonder how the ITC employees that live around the area would feel if the route changed and the lines went next to their sub and their children were put at risk. You know as well as we do that above ground power lines would never end up in the path of an ITC employees home. We have heard that some ITC employees live in an area that would actually cut miles if they used that route but this isn't happening, hmmm, we wonder why. As parents, we owe it to my children to protect them and provide them a safe place to live and grow.

ITC officials also claim that this doesn't hurt property value. Who are they kidding! Nobody in their right mind would buy a home near one of these massive power lines and put their family's health at risk. We wish we would have known that there were plans for these lines 4-1/2 years ago when we moved to Hartland.
